

**NAME**

**apvlv** - PDF/DJVU/EPUB/HTML/TXT/FB2/CZW viewer with vim-like behaviour

**SYNOPSIS**

**apvlv** [options] [file]

**DESCRIPTION**

apvlv is a PDF/DJVU/EPUB/HTML/TXT/FB2/CZW viewer, which behaves like vim.

**OPTIONS**

**-c** *file*

Load configuration from *file* instead of the default *~/.apvlvrc*

**-h**

Show help message and exit

**-v**

Show version and exit

**COMMANDS**

The following command keys can be used inside apvlv. Some of them may be prefixed by a number (as in pressing "13G"), this is indicated by a *count* in their description. Unless noted otherwise, the default value for the number is 1.

- o     Display file chooser to open a PDF/DJVU/EPUB/HTML/TXT file
- O     Select a directory to display
- t     Display file chooser to open a PDF/DJVU/EPUB/HTML/TXT file in a new tab
- T     Select a directory to display in a new tab
- R     Reload the current file
- r     Rotate the document clockwise by 90 degrees
- G     Show page number *count*
- gt    Show next tab

gT     Show previous tab

PageDown, C-f  
      Go forward *count* pages

PageUp, C-b  
      Go backward *count* pages

C-d    Go forward *count* half pages

C-u    Go backward *count* half pages

H      Scroll to page head

M      Scroll to page middle

L      Scroll to page bottom

s      skip some pages *count*

C-p, Up, k  
      Scroll up *count* units

C-n, Down, j  
      Scroll down *count* units

Backspace, Left, h  
      Scroll left *count* units

Space, Right, l  
      Scroll right *count* units

/ *string*  
      Search forwards for *string*

? *string*  
      Search backwards for *string*

f      Toggle between fullscreen and window mode

zi      Zoom in

zo      Zoom out

zw      Zoom to fit window width

zh      Zoom to fit window height

m *char*

Mark the current position to *char*, so that it can be recalled by pressing *char*

' *char* Return to the mark position *char*

''      Return to the last position

q      Close the current window

ZZ      quit the viewer with ZZ, like Vim

c      toggle directory display

## SETTINGS

These can be set in ~/.apv1vrc with "set *setting* [= *value*]".

**guioptions = mTsS**

Weather display menu, toolbar, status and status tool.

**.pdf:engine = MuPDF/Poppler/QtPdf**

Which engine to render .pdf file

**.epub:engine = MuPDF/Web**

Which engine to render .epub file

**.fb2:engine = MuPDF/Web**

Which engine to render .fb2 file

**ocr:lang = eng+chi\_sim**

Pretrained languages which tesseract load to process

**notes:dir = *dir***

Directory to save ebook notes

**autoreload = *int***

If auto reload document after some seconds

**inverted = yes/no**

If use inverted mode for pdf page

**background = *color***

Set background color

## PROMPT

Like the COMMANDS, but prefixed with a colon:

**:h[elp]**

Display the help document

**:q[uit]** Close the current window

**:o[pen]** *file*

Open *file*

:doc *file*

Load *file* into the current window

:TOtext [*file*]

Translate *file* (or the current page) to a text file

:pr[*int*]

Print the current document

:tabnew

Create a new tab

:sp     Horizontally split the current window

:vsp    Vertically split the current window

:fp, :forwardpage [*int*]

Go forward *int* pages (1 by default)

:bp, :prewardpage [*int*]

Go backward *int* pages (1 by default)

:g, :goto *int*

Go to page *int*

:z[oom] *mode*

Set zoom to *mode* (see "set zoom" in SETTINGS)

:*int*    Go to page *int*

:directory

toggle directory display

## AUTHORS

apvlv was written by Alf <naihe2010@126.com>.

This manual page was originally written by Stefan Ritter <xen@thehappy.de> for the Debian project (but may be used by others), and was rewritten more beautifully by Daniel Friesel

<foobar@derf.homelinux.org>.
